

# MODERN COLD-MIX ASPHALT BINDER STABILIZER

Modern CMA Binder Stabilizer is a performance enhancing asphalt binder stabilizer for cold-patch. It is a ready-to-use additive for reducing embodied CO2. No special equipment required.

## STIFFENING

Increases binder stiffness and reduces deformation at high service temperatures without causing cracking.

## THERMAL STABILITY

Improves high-temperature performance with no impact to low-temperature stability.

## UV PROTECTION

Reduces oxidating effect of UV radiation.

## BENEFITS

- No negative impact to workability
- Improves binder stability in high temperatures
- Increases binder stiffness
- Reduces deformation from traffic

## RECOMMENDED APPLICATIONS

- Pothole repair
- Rutting repairs
- Manholes & drains
- Utility cuts
